www.DaVinciPartners.com

Intellectual Property is our middle name™

Offering DA VINCI™ services, for global leaders in innovation

We are a Swiss-based International intellectual property firm specializing in the registration and enforcement of US, European, Swiss, Liechtenstein and International patent, trademark and design rights.

No matter how local your business may be, globalization and the internet have made the competitive landscape international.

Da Vinci Partners LLC is among the first intellectual property firms established in Europe with a primary focus on US intellectual property law. The US market has a great impact on you even if you are not selling there. Protecting IP in the United States can help you maximize overall value of intangible assets, if your IP lawyer knows how to partner with you strategically.

With our colleagues in China, our GREAT WALL IP™ services enable our clients to protect their IP in China as well as provide guidance for clients who wish to enter the Chinese market, manufacture in China, or protect their products from Asian competitors.

Our highly trained, multi-lingual team of specialists enables us to represent clients in various high tech sectors, such as med tech, software and electronics, directly before national and regional patent and trademark offices.

We strive to meet your changing needs in a results-oriented, efficient and effective manner. Innovation is crucial inside our firm, too. We are always working to improve our own processes in order to provide increasing value to our clients.

To us, our clients are the "Da Vincis" of the world. We partner with world-class innovators to ensure that their brands, their core ideas and their inventions have strategic global protection.

We protect your intellectual property worldwide

Think it. Do it. Own it!

SUCCESS STORIES

The Da Vinci™ Filing Strategies

IP STRATEGIES TAKING ADVANTAGE OF US LAW THAT AVOID OR POSTPONE DEADLINE-DRIVEN COST EXPLOSIONS

The two best-known intellectual property protection strategies include filing patent applications and, alternatively, maintaining trade secret protection. Da Vinci™ strategies, on the other hand, are aimed at those innovators who are reluctant to forego trade secret protection by filing a patent application which they know will publish 18 months later. Consequently, these innovators generally opt for the fragile but less costly protection of trade secret alone.

The appropriate Da Vinci™ strategy, however, offers the innovator a powerful alternative to simply not filing a patent application because they can allow the innovator to maintain his trade secret rights while also preserving important patent rights as well as helping maintain control of cost explosions driven by national and international deadlines.

Da Vinci™ filing strategies are, however, only available to those who know US law and so can make the right first step in compliance with these laws. These strategies include:

1. US submarine patent application strategy, and
2. "UFO" design strategy.

When the right first step is taken, innovators gain significant strategic advantages.

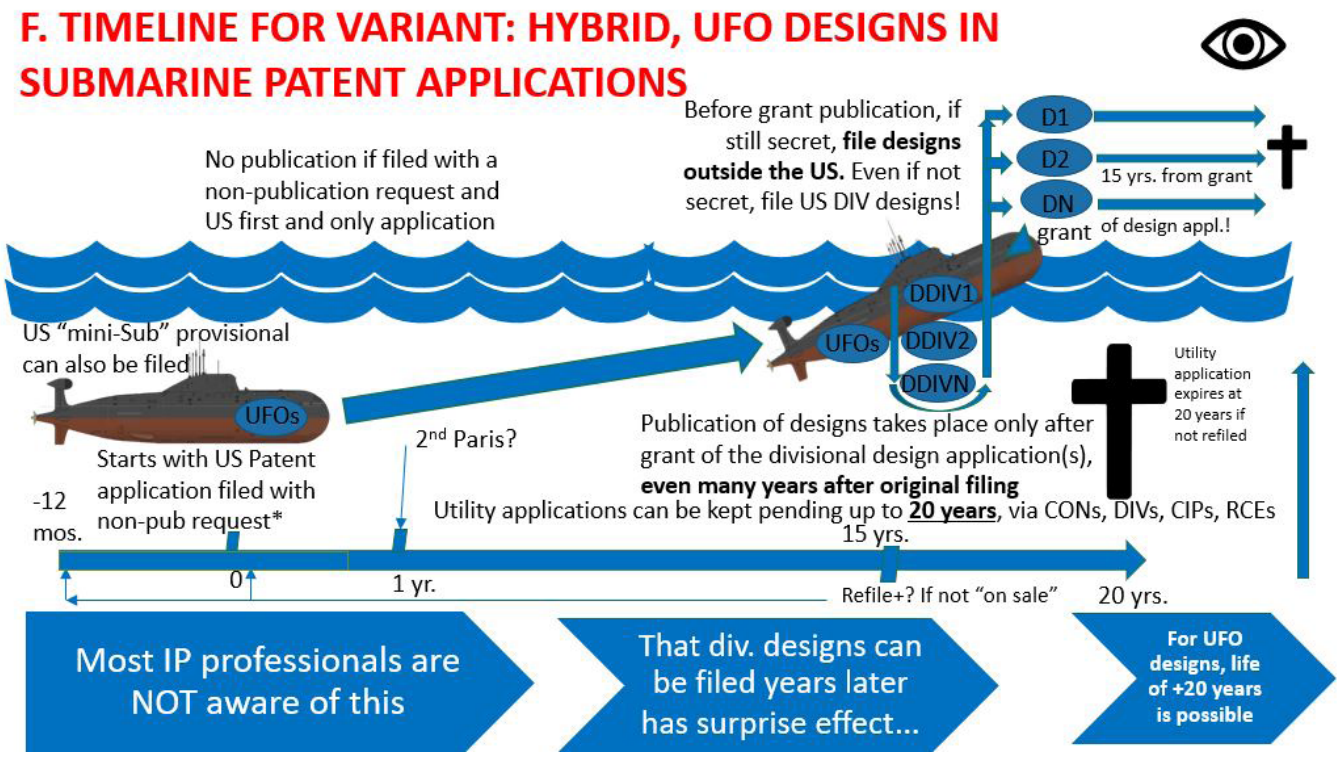

I welcome your comments and questions!
